

Software Security Lab

Replacing Netcat

- Implement the netcat.py using the slide containing the lectures about basic networking tool.
- Run the following command to set up a listener :

```
$ python netcat.py -t 192.168.1.203 -p 5555 -l -c
```

- Now fire up another terminal on your local machine and run the script in client mode. Remember that the script reads from stdin and will do so until it receives the end-of-file (EOF) marker. To send EOF, press CTRL-D on your keyboard:

```
% python netcat.py -t 192.168.1.203 -p 5555
```

CTRL-D

- Now use “ls -la” and “uname -a” shell command on your local machine to execute those in the kali machine and get the output in your local machine.
