Design System

Author:
Sabrina Islam
CSE, IUT

Task

Design a **design system** for a social media app like Facebook or Instagram. You have to build everything from scratch using **Figma Components**.

You may draw inspiration from existing design systems (such as Google Material Design, Apple HIG, Uber Base, etc.). Your components should be **unique and creative** compared to the existing apps as much as possible. **You have to design some pages of your app using your designed components.**

Your design must include relevant components, such as:

- Buttons (default, hover, active, disabled states)
- Dropdowns, checkboxes, etc.
- Cards (e.g., product cards, content previews)
- Navigation elements (navbar, tab bar, sidebar)
- Alerts/Notifications
- Typography and Color palette
- Icons (you may use existing icon libraries)

Submission:

1. **Figma link** and a **PDF** containing your complete design system, with all components organized clearly.
2. **Design System Report.** Your report must include:
 - a. The list of UI components you designed
 - b. The color palette you used and why you chose it.
 - c. If you used inspiration or resources from existing design systems or tutorials, mention and them
 - d. Any additional notes or explanations (e.g., design challenges, accessibility considerations)
