

User group 1 - study abroad aspirant

Namisa Najah

**Age**
24 years

**Location**
West Shewrapara, Dhaka

**Occupation**
Final year CSE student

**Family**
Lives with parents

About

Applying for a Master's in the USA for the next intake. Reads and writes English well from years of schooling, but freezes when she has to speak. Studies after class hours.

Goals & Needs

- Score 8.0+ in IELTS (or 100+ in TOEFL) within 5 months.
- Speak fluently and confidently without translating in her head.
- Practice the visa interview with realistic questions.
- Fix pronunciation and reduce hesitation in the speaking test.
- Learn academic English for SOPs, emails to professors, and coursework.
- Affordable preparation compared to Dhaka coaching centers.
- Track band-score progress section by section.

Motivations

Namisa is motivated by a clear finish line. She'll pay for anything that gives measurable proof she's improving, and abandons anything that feels like amusement without a score attached.

Everyday Activities

- Practices listening with US lectures and podcasts on her commute.
- Attends an evening speaking session or records herself answering cue cards.
- Takes a weekly full mock test and reviews the score breakdown.
- Follows study-abroad groups for university deadlines and scholarships.

Frustrations

- Some language learning apps build vocabulary but don't prepare her for IELTS or TOEFL at all.
- Doesn't have anyone to practice speaking with.
- Coaching centers are expensive and run on fixed batch timings.
- Written English is strong, spoken English is weak, but apps treat both the same.
- Visa interview advice is scattered across YouTube and Facebook, and often outdated.
- No reliable way to know if she's actually at band 8 yet.

Device Usage

- Desktop
- Social Media
- Mobile

User Story 1

As a study-abroad aspirant, I want to record my answers to IELTS speaking cue cards and get instant feedback on pronunciation and fluency, so that I can improve my speaking without needing a partner every day.

User Story 2

As a study-abroad aspirant, I want to take full-length IELTS/TOEFL mock tests with a section-wise band report, so that I know whether I'm ready to book the real exam.

User group 2 - international traveler

Nafid Ajmain

**Age**
29 years

**Location**
Bashundhara, Dhaka

**Occupation**
International Traveler

**Family**
Married

About

Travels 4-6 times a year across Asia and Europe, usually for two weeks at a time. Doesn't want to master a language but wants to survive in it. Learns intensively in the three weeks before a trip and forgets most of it after.

Goals & Needs

- Learn survival phrases for a new country in 2-3 weeks.
- Handle airports, taxis, hotels, restaurants, and pharmacies.
- Read signs, menus, and station boards through the phone camera.
- Understand replies, not just ask questions.
- Use the app offline and without roaming data.
- Switch between multiple languages in one account.
- Avoid causing offence through wrong tone or etiquette.

Motivations

Nafid is motivated by independence and confidence on the ground. He wants to move through a foreign city without a guide or a constant translation app open, and he values speed of usefulness far above depth.

Everyday Activities

- Plans itineraries and researches destinations.
- Runs a 15-minute phrase drill in the weeks before a trip.
- Uses the phone to translate menus and signs while abroad.
- Posts travel reels and answers follower questions about destinations

Frustrations

- Full courses start with alphabets and grammar when he leaves in 20 days.
- Textbook phrases are too formal, locals don't actually speak that way.
- Apps break the moment he loses signal or turns off data roaming.
- He can ask the question but can't understand the answer.
- Each new country means starting a brand-new course from zero.
- No guidance on gestures, tipping, or politeness levels.

Device Usage

- Smart watch
- Social Media
- Mobile

User Story 1

As an international traveler, I want to select my destination and travel date and receive a compressed survival course, so that I can learn only what I need before I fly.

User Story 2

As an international traveler, I want to download phrasebooks and audio for offline use and play a phrase aloud to a local, so that I can communicate without mobile data.

User group 3 - elderly person

Nasrin Islam

**Age**
55 years

**Location**
Uttara, Dhaka

**Occupation**
Retired school teacher

**Family**
Married, children, grandchildren

About

Retired after 25 years of teaching. Her son settled in the USA and her grandchildren speak only English, so she is learning conversational English to talk to them properly and to manage her visits alone. She has moderate hearing loss in one ear, wears reading glasses, and has arthritis in both hands.

Goals & Needs

- Hold a real conversation with her grandchildren over video call.
- Manage airports, immigration, and doctors' visits on her own.
- Learn at a slower pace without feeling rushed or judged.
- Larger text, high contrast, and clearly labeled buttons.
- Adjustable audio speed with captions on every lesson.
- A simple layout that doesn't change every time the app updates.
- Help from a real person when she gets stuck.

Motivations

Nasrin is motivated by family connection and dignity. Every lesson is aimed at one moment, a conversation with her grandchildren where she doesn't have to hand the phone to someone else. She is patient and consistent, but abandons anything that makes her feel incompetent.

Everyday Activities

- Video-calls her son and grandchildren twice a week.
- Studies for 20-30 minutes in the morning when her eyes are fresh.
- Watches English news with subtitles turned on.
- Asks a neighbor's daughter for help when the app confuses her.

Frustrations

- Text and buttons are too small; she taps the wrong option constantly.
- Native-speed audio is impossible to follow and can't be slowed down.
- Timers and streak-loss warnings make her anxious rather than motivated.
- Lessons have no captions, so she can't verify what she heard.
- Drag-and-drop and swipe exercises are painful and unreliable with arthritis.
- Cluttered screens with animations and pop-ups make her lose her place.

Device Usage

- Tablet
- Mobile
- Sometimes desktop

User Story 1

As a senior learner with hearing difficulty, I want to slow down lesson audio and read a synchronized transcript, so that I can follow spoken English at my own pace.

User Story 2

As a senior learner with limited vision and dexterity, I want a simplified high-contrast interface with large tap-only controls, so that I can use the app comfortably without mistaps or eye strain.
